

HuckLok[®] Blind Rivets

Double-locking, wide-grip fasteners
for metals, plastics, and composites

Wide Grip Range and Large Footprint

A generous, quarter-inch grip range lets the new HuckLok blind rivet join assemblies that are 1/8 to 7/8 inch thick. HuckLok's large footprint, or "bulb," spreads the load over a broad area, for a durable, dependable connection with all types of metals, plastics, and composites.

Unique Double-Lock Design

As shown in the illustrated installation sequence, the HuckLok's double locking system actually locks the assembly from both sides, for incomparable performance and reliability. "Breakaway" ring design lets the shear ring settle into the appropriate catch groove, ensuring a consistent clamp throughout the HuckLok's wide grip range.

Fast, Foolproof Installations

With HuckLok blind rivets, quality installations do not depend upon the skill of the worker or the correct insert in the tool. They install in seconds, cleanly and precisely, and require no more than a glance to confirm an accurate set. If the core pin is flush the HuckLok has been properly installed.

Dimensional Data

Dia. (No.)	Part No.	Grip Range	Hole Size	A	B	C	F	G
3/16 (6)	HKLP-R6-5	.062-.312	.191-.201	.120 MAX	.348-.388	.101 MAX	.900	183-.190

	HKLP-R8-14	.625-.875	.261-.272	.162 MAX	.490-.530	.110-.125	1.562	251-.260
1/4 (8)	HKLT-R8-6	.080-.375	.261-.272	.162 MAX	.532-.592	.110-.125	1.062	251-.260
Truss Head	HKLT-R8-7	.187-.437	.261-.272	.162 MAX	.532-.592	.110-.125	1.124	251-.260
	HKLT-R8-10	.375-.625	.261-.272	.162 MAX	.532-.592	.110-.125	1.312	251-.260
	HKLT-R8-12	.500-.750	.261-.272	.162 MAX	.532-.592	.110-.125	1.436	251-.260
	HKLT-R8-14	.625-.875	.261-.272	.162 MAX	.532-.592	.110-.125	1.562	.251-.260

Installed Values (Minimum)

	3/16	1/4
Shear	1900	3500
Tensile	1000	1900
Pin Retention	150	400
Installed Pin Position	±.030	±.030

Material and Finish

Material	Sleeve	Pin	Sleeve Finish	Pin Finish
Steel	Steel	Steel	Zinc Plate with Clear Chromate	Zinc Plate with Clear Chromate

Breaking flush throughout its grip range, the HuckLok blind rivet lets the worker verify installation accuracy at a glance and eliminates costly cosmetic finishing

Undercut fillet allows seating in burred holes

The HuckLok's wide footprint provides a broad blind-side bearing surface that resists pull-through

Solid pin provides exceptionally high strength in the shear plane

Lock groove on pin engages shoulder on rivet head, while the extruded support ring "double locks" the pin within the bulb

Installation Sequence

1
Insert the HuckLok fastener into the hole and slip the installation tool over the pintail.

2
Press the trigger to initiate pulling action. As the tool pulls on the pintail, the shear ring pushes the rivet sleeve outward, forming a bulb that compresses against and tightens the application.

3
During bulb formation, the shear ring forms a support ring from the rivet sleeve by creating a build-up of material above the ring.

4a (Min Grip)
The shear ring breaks free and is pressed onto the catch grooves. The pulling action continues until the internal rivet shoulder engages the lock groove on the pin and forms an internal lock. The pintail then breaks off, completing the installation.

4b (Max Grip)
Shown in maximum grip, the shear ring breaks free and settles into a catch groove upon completion of the pulling sequence. Double locking occurs as the sleeve "back fills" behind the shear ring while it travels through the sleeve.

¹ Not recommended for large production runs.

² Can be used with 245/246, 255/256, 2502/2503 with adapter 102463.

³ Covers -.06 and -.08 diameters.

⁴ Longer grip applications may take two strokes to install.
